DECLARATION

In Regards to the Application of:

Patent Titled: A Method of NeuroModulation Technique
Inventor: LESLIE S FEINBERG
Application No. 10.662,960

Dear Sir:

I, Frederik H. Bloem, a citizen of the United States of America declare under penalty of perjury:

I reside at: 4108 Alfalfa Terrace, Olney, Maryland 20832-2962.

My educational background related to the field of this invention is family medicine (M.D.) and bariatric medicine.

I have the following certifications related to the field of this invention:
NeuroModulation Technique, Comprehensive Level and Advanced Level.

I have been providing medical care and treatment to patients since 1987.

I have reviewed NMT: The Feinberg Technique, teaching the protocols of NeuroModulation Therapy.

App# 10/662,960
Declaration # 20

The teachings and protocols taught by NMT: The Feinberg Technique, effectively teach a useful method of NeuroModulation Technique as disclosed.

I have personally utilized this method in a useful manner in treating patients.

I believe that the disclosed NeuroModulation Technique is useful in the health care field.

I have personally utilized the disclosed technique to treat patients and offer the follow case studies:

1. Application of NeuroModulation Technique for the treatment of chronic, allergic sinusitis

D.H. is a 53-year-old woman who presented with a chief complaint of chronic sinus congestion and nasal allergies. She was allergic to mold, grasses, pollen, feathers, cats, dogs, and horses. Prior to seeing me she had received allergy shots (allergen immunotherapy) and she had been prescribed Zyrtec (cetirizine, an antihistamine) and Nasacort AQ (a steroid nasal spray). She also rinsed her sinuses daily with salt water. She had surgery for maxillary sinuses in 1998. Acupuncture treatment helped a little, but the relief did not last.

I treated the patient's allergies and chronic sinus infection with NeuroModulation Technique. After only one treatment session the patient's symptoms improved significantly and she was able to stop the Zyrtec.

After the second treatment session the patient was able to stop the Nasacort too. Her nose was just mildly congested. Being an accomplished singer, she also noticed that her vocal cords were recovering and that she was getting her voice back.

During the next few treatment sessions the patient's symptoms continued to improve and, while singing, she was able to reach the higher notes again. The patient discontinued treatment after a total of four treatment sessions and remained symptom free without any prescription medications or nonprescription remedies.

2. Patient testimonial on the use of NeuroModulation Technique for the treatment of mosquito bites

"When I first heard about NMT [Neuromodulation Technique], I was extremely skeptical. I couldn't see how the treatment could work on varied complaints, ranging from asthma to allergies. However, when I stepped outside for five minutes and came back with over nine itching, raised mosquito bites that would normally last a week or more and often scarred, I was desperate enough to try it.

After a series of questions to determine treatment, with the use of an ArthoStim instrument, Dr. Bloem said that there would be significant improvement in my mosquito bites in two hours, and that there would be complete resolution in ten hours. On mosquito bites that stayed for weeks! Yeah right. I needed plenty of anti-itch cream, that was what! However, a little over three hours later, I noticed that the bites on the underside of my knees and legs weren't itching. I looked to see if they had indeed receded, but was amazed to find they were completely gone! No itching, no scabs, no scars at all. I thought it was too good to be true, but NMT made it possible!"

3. Application of NeuroModulation Technique for a patient with signs and symptoms of viral meningitis.

J.M. was an 18-year-old female who presented to me with a chief complaint of severe headache and insomnia after having been stung by a mosquito several months before. The patient had been admitted to the hospital twice. However, the laboratory evaluation was negative and the patient's symptoms did not respond to treatment with antibiotics. After just a few treatment sessions with NeuroModulation Technique the patient's symptoms improved dramatically.

4. Application of NeuroModulation Technique for a patient with severe anxiety

M.D., a 47-year-old male with a history of depression, presented to me with signs and symptoms of severe anxiety. He was visibly shaking. After just one treatment with NeuroModulation Technique his anxiety resolved completely.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Signed:
